

1 **ABSTRACT OF THE DISCLOSURE**

2 A rail assembly for furniture has a stationary track, an internal track,
3 a sliding frame, a latch bracket and a resilient latch. When the internal track
4 and sliding frame are pushed in, the resilient latch engages the sliding frame as
5 the sliding frame releases the resilient latch from an extended position. The
6 latch bracket automatically pulls the resilient latch and the attached sliding
7 frame to a completely closed position.
